

Sammi Beard

DSC 640 – Weeks 3&4 |

## **Audience**

The audience for this presentation is the security and secret service agents at the white house.

## **Purpose**

The purpose of this presentation is to provide data about the number of visitors expected so that they can plan accordingly for staffing.

## **Medium**

Infographic/poster to hang in their staff room.

## **Design**

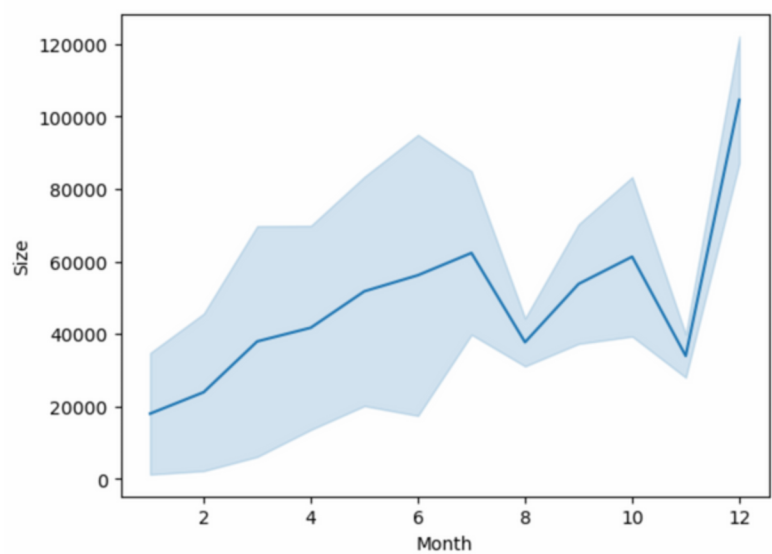

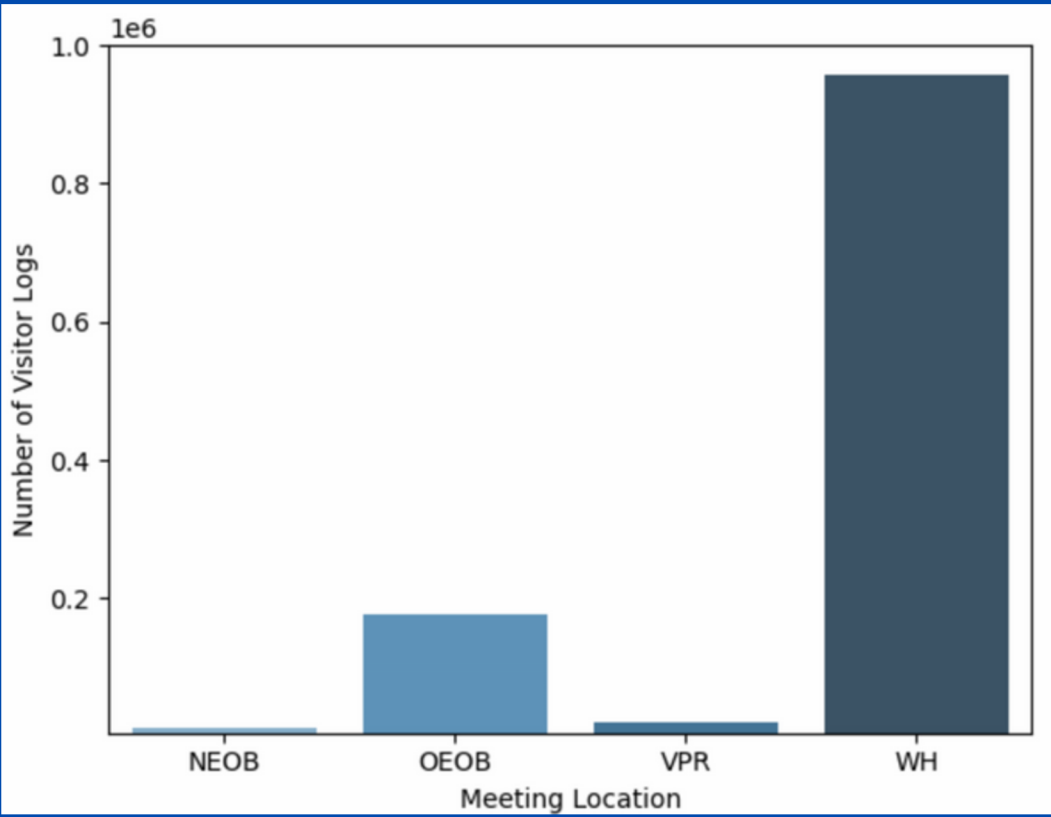

I used red white and blue for the national government colors. I also used a line to segment different data points and draw the eye downward.

## **Ethical Considerations**

Ethically I think this is a sound data presentation. I did recommend a dashboard to track reservations in real time in the future.

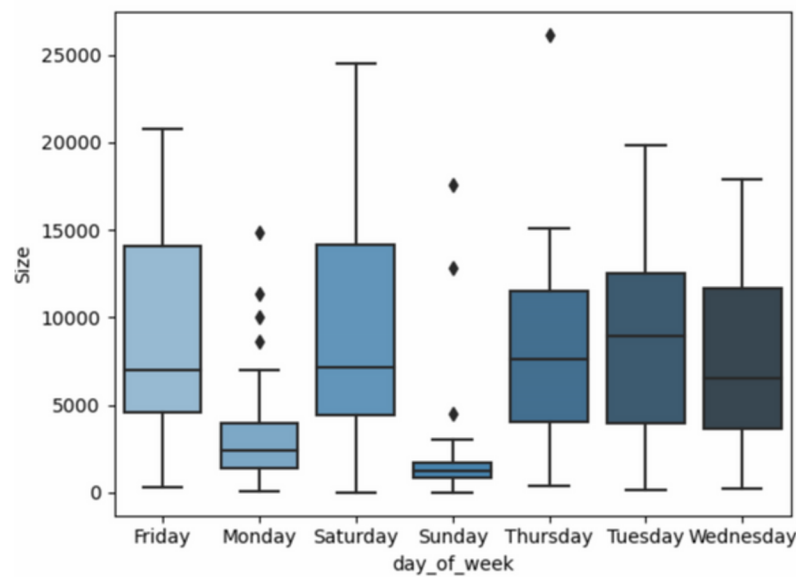

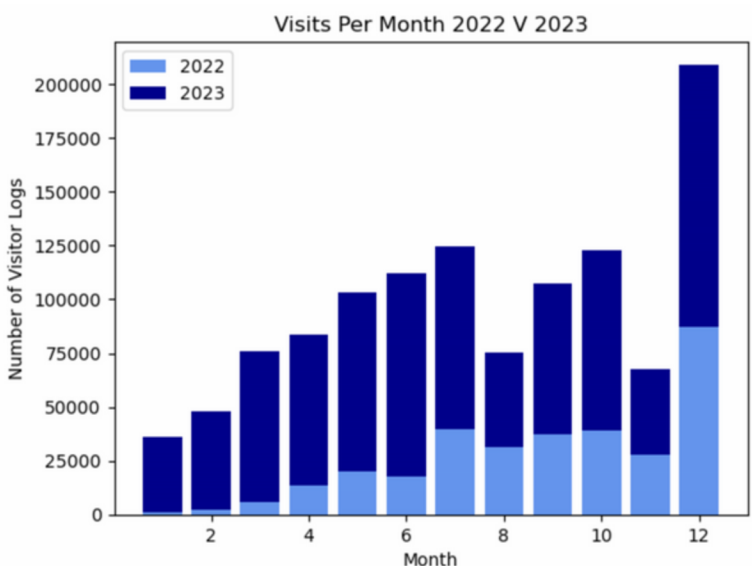

# Security Planning based on visitation data 2022-2023

## WHITE HOUSE AND RELATED BUILDINGS

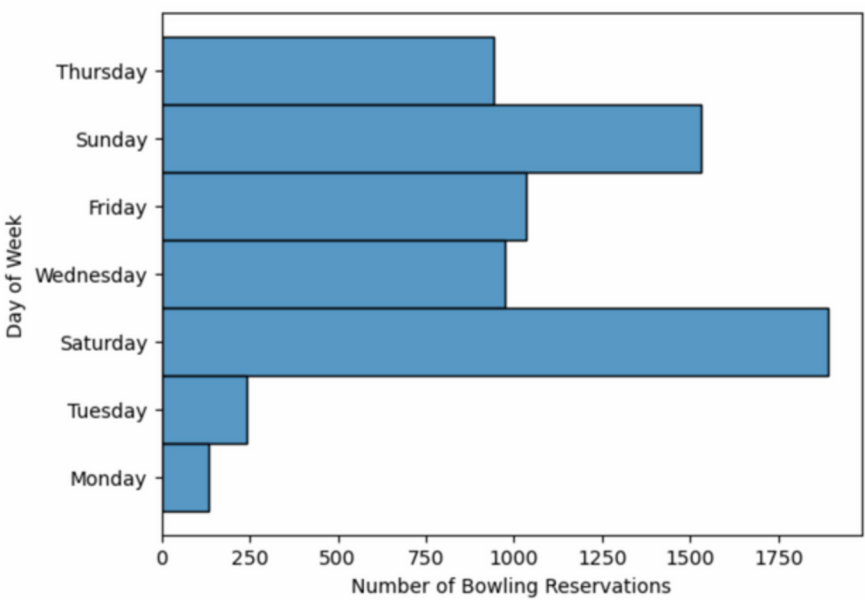

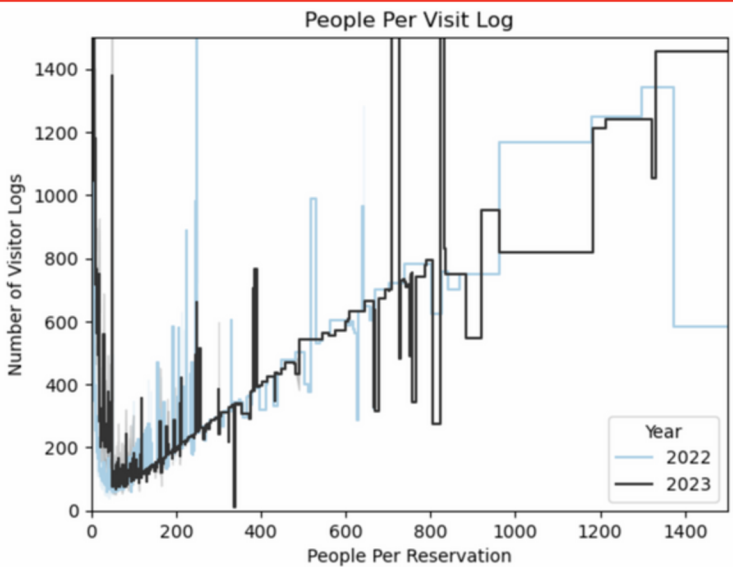

Agents will have limited availability to request off time in December due to the large increase in visitations. Will also need to watch reservations during other peak times to make sure there is enough staff.

We saw increased visitation month over month from 2022 to 2023. Consider adding staff if visitations continue to increase.

With tours not taking place on Monday or Sundays, visitations are significantly lower. Most of the other days have similar number of visitor logs, with Saturdays having the most variation and Tuesdays having the highest median number of visitors.

Group size varies widely - track reservations for large group sizes to determine staffing needs.

As an incentive, consider placing those who volunteer to work weekends to have their favorite assigned area, such as the bowling alley.

As we continue to gather data over the years, we recommend creating a dashboard for real-time data

# Sammi Beard
